

Module 6

HTML Lists

Module Overview

- Types of Lists in HTML
- Adding Lists to HTML

Types of Lists in HTML

- Lists organize sets of information in a clear and easily understood format
- The types of lists in HTML are:
 - Unordered lists which sets groups of items in no particular order
 - Ordered lists which sets groups of lists in a particular order
 - Definition lists which sets groups of lists in name-value pairs such as terms and their definitions

Adding Lists to HTML (Unordered List)

- To add an unordered list in a HTML document, the **** and **** tags are used
- Individual list entries are represented using the **** tag

```
<ul>  
    <li>list item 1 </li>  
    <li>list item 2</li>  
    <li>list item 3</li>  
</ul>
```

Adding Lists to HTML (Unordered List) contd.

- list item 1
- list item 2
- list item 3

Adding Lists to HTML (Ordered List)

- To add an ordered list in a HTML document, the **** and **** tags are used
- Individual list entries are represented using the **** tag

```
<ol>  
    <li>list item 1 </li>  
    <li>list item 2 </li>  
    <li>list item 3 </li>  
</ol>
```

Adding Lists to HTML (Ordered List) contd.

1. list item 1
2. list item 2
3. list item 3

Adding Lists to HTML (Definition List)

- This type of list is quite different from the other two types of lists
- To add a definition list in a HTML document, the **<dl>**, **<dt>** and **<dd>** tags are used
- In this type of list, the tags **<dt>** and **<dd>** represent a list item
- The tag **<dt>** is for the name or term while the tag **<dd>** is for its value or definition

Adding Lists to HTML (Definition List) contd.

```
<dl>  
  <dt>Countries in South America</dt>  
  <dd>Ecuador</dd>  
  <dd>Argentina</dd>  
  <dt>Countries in Africa</dt>  
  <dd>Ghana</dd>  
  <dd>Nigeria</dd>  
</dl>
```

Countries in South America
 Ecuador
 Argentina
Countries in Africa
 Ghana
 Nigeria
